RESTAURANT · DALLAS

44 Emerging
OUT OF 100 · CONFIDENCE FIRM

OVERALL	VISIBILITY	SITE SETUP
44	25	73

Your overall score combines two things: how often AI engines name your business when customers ask buying questions (60%), and how easily those engines can read your site, shown above as Site setup (40%). Answers an engine did not give are left out rather than counted against you.

PART 1

Where you stand

What the engines say about you today, question by question.

SITE SETUP TO ACT ON

6

6 checks worth changing

In this scan, one more answer naming you would move the measured visibility score by about 8.3 points.

That is how the score is built, not a prediction of what the engines will do: visibility is averaged over every answer the engines gave, so one more answer citing you moves it by about that much, and a lower place in the answer moves it less.

Visibility is how consistently you appear across the answers tested. **Share of voice** is your slice of every business the engines named. A business can lead the second while appearing in a minority of answers, and that is the case here: 5th for share of voice, named in 4 of 12 answers.

The questions at a glance

CUSTOMER QUESTION	YOUR BEST ANSWER	ENGINES NAMING YOU	NAMED INSTEAD
Eritrean Restaurant in Dallas	●Cited	2 of 4	Dallul East African Restaurant
best Ethiopian restaurant in Dallas BRANDED	●Cited	1 of 4	Desta Ethiopian Restaurant, Ethiopic, The Queen of Sheba
Ethiopian Restaurant in Dallas Texas	○Named	1 of 4	Desta Ethiopian Restaurant

“Your best answer” is the strongest verdict any engine gave for that question. “Engines naming you” counts the engines that gave an answer; an engine that gave no AI answer is left out rather than counted against you. “Named instead” lists who the engines put forward on the answers that left you out.

Why this matters now

More and more buying decisions start with a question to an AI assistant rather than a search. When someone asks ChatGPT, Google or Perplexity who to use, the answer is a shortlist of two or three names, and the businesses on it are the ones that get the call.

This report shows where your business is on that shortlist today, where it is not, and what would change the answer. The numbers are measured, not estimated: every figure comes from a real question put to a real engine on the date shown, and the engines’ own words are quoted so you can see the evidence for yourself.

AI answers move as websites change and as the engines update, so treat any single figure as a reading rather than a ranking. The direction across scans is the result that matters.

How different AI models see your business

ChatGPT		67	3 answers
Claude		11	3 answers
Perplexity		22	3 answers
Gemini		0	3 answers

An engine that gave no AI answer is left out rather than scored zero. AI answers vary from run to run, so treat a single figure as an estimate and the direction of travel across scans as the finding.

How the answers split

Cited	2	17%
Recommended	1	8%
Named	1	8%
Absent	8	67%

Named in 4 of 12 answers; 3 excluded from the score rather than counted as absent.

PART 2

The competition

Who else the engines name, and where you already win.

IN THIS PART

Your share of the AI voice

Who wins the questions

Where you already win

Where AI is getting their information

Your share of the AI voice

Directories are excluded from this chart rather than counted as rivals. Sites like Checkatrade and Yell are named more often than any single business, and counting them would suggest a competitor that cannot be beaten rather than a listing worth being on, so they appear under the sources instead.

Who wins the questions

Desta Ethiopian Restaurant	TRACKED		2 questions
Yenat Guada Ethiopian Cuisine	TRACKED		1 question
Banna Restaurant & Bar			1 question
Rahwa Bar and Restaurant			1 question
Dallul East African Restaurant	TRACKED		1 question
The Queen of Sheba	TRACKED		1 question
Ethiopic			1 question

Counted per question, not per answer: a rival named by four engines on one question is one question won, not four.

Where you already win

- “Banna Restaurant & Bar – Eritrean & Ethiopian 9560 Skillman St #120, Dallas, TX 75243. Good first pick in Dallas proper; they highlight injera, tibs, wats, vegan combos, and coffee ceremony.”*

CHATGPT · CITED · ERITREAN RESTAURANT IN DALLAS
- “Also worth considering: Banna Restaurant & Bar – newer Eritrean/Ethiopian option, good if you want a bar/late-night vibe; its site lists hours as daily 11am–2am.”*

CHATGPT · CITED · BEST ETHIOPIAN RESTAURANT IN DALLAS
- “Other notable mentions: Banna Restaurant and Bar, Queen of Sheba Restaurant, and Addis (per Yelp's top-rated lists) are also popular choices in the area.”*

CLAUDE · NAMED · ETHIOPIAN RESTAURANT IN DALLAS TEXAS

PART 3

Your website

What on the site helps or hinders an engine reading it.

IN THIS PART

How readable is your website to LLMs

What needs fixing

How readable is your website to LLMs

● NEEDS ATTENTION · 3

WHAT TO CHANGE	WEIGHT
Answer the question in the first line of the page Your pages answer the question eventually, but the answer is some way down and wrapped in description. Engines tend to quote the first plain, specific sentence they find, so moving yours to the top of the page helps; it is usually an afternoon per page.	0.16
Answer more of the questions customers ask You answer a couple of common questions on your site, but not the ones buyers ask most: what it costs, how long it takes, where you work. AI systems quote sites that answer plainly, and a question you don't answer is one they answer from a competitor.	0.12
Get listed where AI looks for businesses like yours When the engines answered your questions they quoted directories, and you are not on them. This is the cheapest kind of win on the list: you are not competing for the listing, you are simply absent from a page an AI already trusts and already reads.	0.10

◐ WORTH IMPROVING · 3

WHAT TO CHANGE	WEIGHT
Make your contact details easy to find We could not find a phone number written as text anywhere in your pages. AI systems cross-check who you are against directories and listings, and with no contact details to match, there is nothing to confirm your site and your listings are the same business. Your phone number and address in the footer, as text rather than inside an image, is enough.	0.06
Help AI find every page on your site AI systems find your pages by following a map of your site and by telling one page from another. Part of that is missing, so some of what you have published may never be read at all. The technical detail below names exactly which part.	0.04
Give AI systems a guide to your site There's a small text file you can add that tells AI systems what your site covers and which pages matter. You don't have one. It is newer and less established than the rest of this list, so treat it as cheap insurance rather than a fix; we'd rather say that than oversell it.	0.02

✓ WORKING WELL · 4

WHAT IS ALREADY RIGHT	WEIGHT
Let AI systems read your website Every crawler that AI systems send out to read live web pages can reach yours. That is the one thing on this list that everything else depends on, and it is already right.	0.18

Help AI understand your services

0.16

Your site states who you are and what you sell in the form machines trust, so AI systems can quote your services accurately instead of guessing from your page text.

Let AI systems learn about your business over time

0.06

The crawlers AI companies use to learn about businesses can all reach your site, so what future models know about you keeps up with what you publish.

Make your pages easy to load and read

0.04

Your pages load over a secure connection, work on a phone, and can be read without running JavaScript, which is what the simpler AI crawlers need in order to see anything at all.

What needs fixing

FIX	STATUS
LocalBusiness structured data Structured data is the most reliable way to state facts about your business that an AI engine will not misread. Paste this into the <head> of your homepage.	To do
Footer contact block Paste this into your footer on every page and fill in the capitalised slots. We left them blank rather than guessing: a wrong number in your footer is worse than none.	To do
sitemap.xml A starting sitemap listing the pages we could read, plus the two lines that make it count: the robots.txt reference and the canonical tag. Add anything we missed before you publish it.	To do
llms.txt Upload this as llms.txt at the root of your site. It tells AI engines what you do and which pages to read first, in one file.	To do

PART 4

The plan

What to do, in order, and what each change could be worth.

IN THIS PART

Action plan

Next steps

Action plan

WHEN	WHAT TO DO	WORTH	STATUS
NOW	DO THIS Answer the question in the first line of the page WHY IT MATTERS Your pages answer the question eventually, but the answer is some way down and wrapped in description. Engines tend to quote the first plain, specific sentence they find, so moving yours to the top of the page helps; it is usually an afternoon per page.	Up to 3.4 overall points (8.5 of site setup) About 120 minutes	
NOW	DO THIS Answer more of the questions customers ask WHY IT MATTERS You answer a couple of common questions on your site, but not the ones buyers ask most: what it costs, how long it takes, where you work. AI systems quote sites that answer plainly, and a question you don't answer is one they answer from a competitor.	Up to 2.6 overall points (6.4 of site setup) About 45 minutes	
NOW	DO THIS Get listed where AI looks for businesses like yours WHY IT MATTERS When the engines answered your questions they quoted directories, and you are not on them. This is the cheapest kind of win on the list: you are not competing for the listing, you are simply absent from a page an AI already trusts and already reads.	Up to 2.1 overall points (5.3 of site setup) About 30 minutes	
NOW	DO THIS Make your contact details easy to find WHY IT MATTERS We could not find a phone number written as text anywhere in your pages. AI systems cross-check who you are against directories and listings, and with no contact details to match, there is nothing to confirm your site and your listings are the same business. Your phone number and address in the footer, as text rather than inside an image, is enough.	Up to 1.3 overall points (3.2 of site setup) About 10 minutes	Written, to do
NEXT	DO THIS Help AI find every page on your site WHY IT MATTERS AI systems find your pages by following a map of your site and by telling one page from another. Part of that is missing, so some of what you have published may never be read at all. The technical detail below names exactly which part.	Up to 0.9 overall points (2.1 of site setup) About 30 minutes	Written, to do
NEXT	DO THIS Give AI systems a guide to your site WHY IT MATTERS There's a small text file you can add that tells AI systems what your site covers and which pages matter. You don't have one. It is newer and less established than the rest of this list, so treat it as cheap insurance rather than a fix; we'd rather say that than oversell it.	Up to 0.4 overall points (1.1 of site setup) About 10 minutes	Written, to do

Ranked by what each change could be worth to the overall score, on one scale: a website check's unearned share of site setup (40% of the overall), or the visibility points (60% of the overall) that one more answer per engine carries. "Worth" is this scan's arithmetic, not a forecast of what the engines will do. A fix already written

for you moves up a step, because it costs nothing to put in place.

Next steps

Start with the action plan. The items marked Now are written and ready to put in place this week; the rest follow in order.

Once the first changes are live, run the scan again. The engines re-read websites on their own schedules, so allow a few weeks between scans and compare the direction rather than a single figure.

If you would like help putting the plan in place, or a regular check on how the answers are moving, get in touch.

Appendix

The evidence in full: every answer, the pages the engines quoted, the questions asked, and how it was measured.

The questions asked

#	QUESTION	INTENT
1	best Ethiopian restaurant in Dallas BRANDED	
2	Ethiopian Restaurant in Dallas Texas	
3	Eritrean Restaurant in Dallas	

How we measured this

Scanned	25 Aug 2026
Questions	3 buying questions
Engines	Google AI Overviews, Claude, Gemini, ChatGPT, Perplexity
Answers	12 scored; 3 answers where an engine gave no AI answer, left out
Runs	One run per question per engine, on the date above. AI answers vary from run to run; treat a single figure as a reading and the direction across scans as the finding.
Rules	scoring rules v1, website check registry v5; the stamp on the closing page carries the same

THE FOUR VERDICTS

● Cited	the engine quoted your website as its source (3 of 3 points)
◐ Recommended	the engine told the customer to choose you (2 of 3 points)
○ Named	you were one of several businesses mentioned (1 of 3 points)
· Absent	you were not in the answer (0 of 3 points)

Visibility is the average, over every answer that was scored, of the verdict's points out of 3, with a recommendation lower down the list worth less ($\times 0.85$ per place below first). An engine that gave no answer is left out of the average rather than scored zero.

Site setup is a weighted average of the website checks that applied, with a pass worth 1, a partial 0.5 and a fail 0 of each check's weight. A check that was not run is left out of the average, not counted as a fail.

Overall is 60% visibility and 40% site setup.

Share of voice counts how often each business is named across every answer, you included, and shows each as a share of the total. Directories and listing sites are left out and shown under sources instead: they appear in most answers and counting them would suggest a rival you cannot beat rather than a listing worth being on. Businesses you have asked us to exclude are left out of the total as well.

What the report will not do is predict. Every "worth" on the plan is this scan's own arithmetic: how far the score could move if a change were made in full. Whether and when the engines change their answers is theirs to decide; the next scan is how you find out.
